

YOUR PARTNER IN PIPELINE ASSET MANAGEMENT

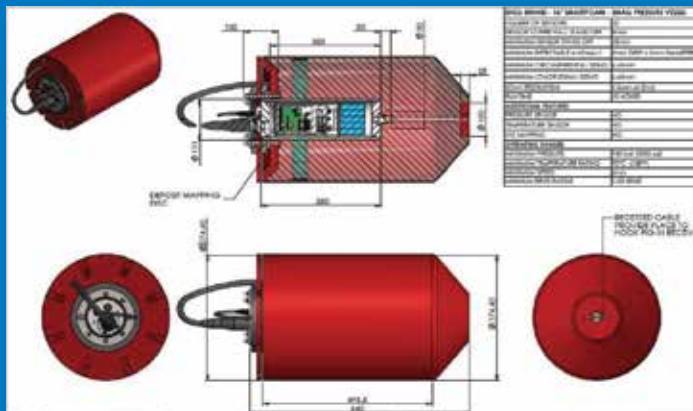

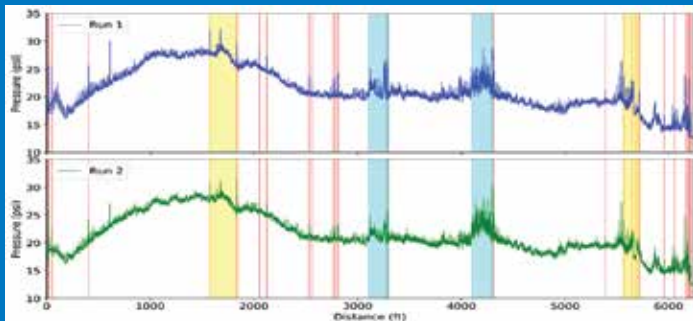

PRESSURIZED PIPELINES

PIGGING AND IN-LINE ASSESSMENTS

SFE has been performing pipeline pigging services for over 25-years. An effective method of both cleaning and inspection, our team utilizes a progressive pigging approach to maintain your critical pipeline infrastructure. Offered as an independent service or in coordination with pipeline pigging, SFE Global has a variety of non-destructive technologies available to provide valuable information about pipeline asset operation and condition. Data obtained can provide:

- Cracking, pitting, dents, and deformation
- Isometric mapping
- Plot hydraulic profiles
- Detect and locate leaks
- Assess magnetic features and anomalies
- Detect and map restrictions in all pipelines. (debris, scaling, valves, fittings, joints)
- Pipeline mapping and locationing

Depending on the pipeline size, material, and level of analysis required, SFE has multiple free floating and pig hosted solutions. Our team of Project Managers and Technical Staff will work closely with you to identify project objectives, develop an approach, and effectively and safely manage the inspection of your critical infrastructure.

ABOUT US

SFE GLOBAL (SFE) is a municipal and industrial service company specializing in pipeline monitoring, data collection, and assessments. Our technologies and approach provide a key data link to the pipeline asset management chain.

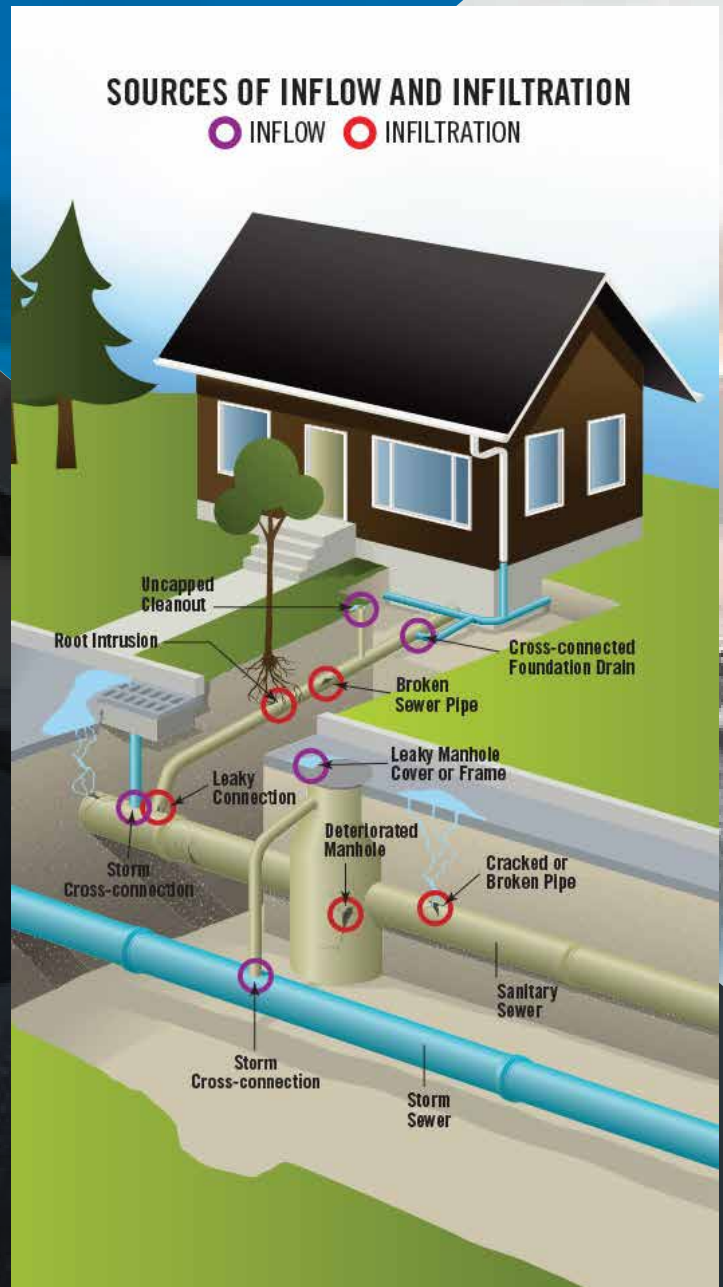

WHAT WE DO

Whether it's a pressurized pipe or open-channel system, SFE Global has the technology and resources to gather critical pipeline and operational data; allowing our clients to make informed decisions about their underground pipe assets.

OPEN CHANNEL PIPELINES MONITORING AND ASSESSMENTS

SFE utilizes state of the art technology from leading manufacturers for all our monitoring and assessment projects. Our experienced team has over 60-years of collective experience in all applications of open channel pipeline services

- Sanitary Sewers – Capacity, Inflow & Infiltration, Billing Stations.
- Storm Water – Sewers, Creeks, Culverts, Streams, Creeks – Flows, Levels, Water Quality
- Industrial Effluent – Temporary and Permanent Systems
- CSO/SSO Monitoring – Monitoring and Alarming
- Customized Solutions and Programs.
- Wireless Data Acquisition and Data Management
- Sewer Smoke Testing
- Lift Station Drawdown Testing

TESTIMONIALS

“SFE has provided all our monitoring needs for the past 15 years. Their staff are experienced, knowledgeable, and responsive and a pleasure to work with, and I admire their attention to detail in a difficult and hostile environment. SFE has always delivered quality and value in our projects. What more can I say – quite simply the best in the business.”

Larry Bodnaruk
Senior Water Resource Engineer

“We have done several water transmission line swabbing projects with SFE Global for final commissioning. We were able to work closely with SFE staff on-site to successfully pig a large potable water transmission pipeline.”

Egidio Chiarello
Project Manager
M.A.P. Water & Sewer Services Ltd.

OUR SERVICES

Pipeline

- Pipeline Pigging
- Inline Pipe Assessments
- Pipeline Mapping
- Smart Pig Gauging
- Sewer Force Main Assessments
- Force Main Assessments

Infrastructure

- Sewer I&I and Capacity Monitoring
- Storm Water Conveyance Monitoring
- Industrial Effluent Monitoring Stations
- Sewer Smoke Testing
- Fire Flow Testing
- Pump Station Testing
- Creek/River Flow Monitoring

Wireless monitoring

- CSO/SSO Monitoring and Alarming
- Pump Station Monitoring
- Rainfall Monitoring/Alarming
- Water Quality Monitoring/Sampling
- Water Distribution
- Remote Location Monitoring
